## LEAD-HD

*Longitudinal Endpoint Assessment of  
Disease Burden in HD*

An online longitudinal study  
for understanding how  
patients are impacted by  
Huntington's disease.

### What is LEAD-HD?

LEAD-HD will enable individuals with HD and those who are pre symptomatic (have a positive gene test but are not diagnosed) to participate in a 2-year study that is completely online. LEAD-HD will ask questions about day-to-day activities and also about problems people experience due to living with HD or being pre symptomatic.

### Why Your Participation Matters...

Our mission is to speed up the development of treatments that make a difference for people affected by Huntington's disease (HD). Your input is a cornerstone of this effort. The main goals of the LEAD-HD study are to:

- Understand early changes in day-to-day life in HD
- Understand what problems trouble people the most
- Study factors affecting disease progression in HD
- Understand the questionnaires used in this research study

#### myHDstory<sup>®</sup>

myHDstory<sup>®</sup> is an online direct-to-patient research platform developed and owned by HSG.

The goal of the platform is to break down barriers to research participation, allowing HSG to engage a broader, more diverse population in support of our mission of accelerating treatments that make a difference.
